I consider myself as a flexible, independent and dynamic person, also with many concerns (not only professional, but personal too). I'm not looking for any kind of job, I'm looking to create my own job; a job to enjoy with, where I could fully develop my already known skills and where I could discover new ones.

I am currently interested in focusing my career on issues related to the management of research projects and the dissemination of scientific culture. Nowadays there exist plenty of projects where my technical background and expertise could be valuable. Other "more humanistic" subjects, such as communication and resources and people management, are also on my mind right now.
